

Experiment 1: Flight Reservation System using Zoho Creator

Aim

To create a cloud-based Flight Reservation System using Zoho Creator to manage flight bookings, passenger details, travel class, fare, and booking status.

Procedure

1. Open Zoho Creator and create a new application named Flight Reservation System.
2. Create data models for Airline, Passenger, Airport, Flight Schedule, Fare Class, and Booking.
3. Create the Booking form with fields such as Booking Reference, Passenger, Flight Schedule, Fare Class, Trip Type, International Flight, Total Fare, Booking Date, Payment Status, and Booking Status.
4. Create a dashboard to display booking details and flight information.
5. Enter sample booking data, such as booking reference BK1001, passenger Rose, Economy class, One Way trip, and total fare ₹5,000.
6. Open the Booking Report to view the stored booking details.

Input

The screenshot displays the Zoho Creator interface for configuring a 'Booking Report'. On the left, a 'Build Agent' chat window is active, showing a message from Zia: 'Hi, I'm your AI developer. What would you like me to build today?'. Below this, a notification states: 'Zia will apply changes directly to your live app. Work in a test environment instead?' with 'Create Environment' and 'Dismiss' buttons. The main area is titled 'Configure Fields' and lists the following fields: BK1001, Rose, Flight Schedule, Economy, One Way, No, 5000, 10/10/2026, Payment Status, Special Requests, and Confirmed. On the right, the 'Display' configuration panel is open, showing settings for the selected field 'No'. The 'Display Name' is set to 'No', and the 'Display Value' is set to 'true'. The 'If True display values as' is set to 'true', and the 'If False display values as' is set to 'false'. A 'Delete Field' button is located at the bottom right of the 'Display' panel. At the bottom of the screen, a trial expiration notice states: 'Trial expires in 15 days | Upgrade'. The bottom status bar shows the system clock as 20:46 on 10-10-2026.

Output

The screenshot displays the Zoho Creator interface for a 'Flight Reservation System'. The left sidebar contains navigation links: Home, Booking (selected), Passenger, Flight Schedule, Fare Class, Reports, and Settings. The main content area is titled 'Flight Reservation System — Booking Report'. It features a search bar with the placeholder 'Search by booking reference, passenger...', a date filter set to 'All Dates', and an 'Export' button. Below these is a table with the following data:

Booking Reference	Passenger	Flight Schedule	Fare Class	Trip Type	Is International	Total Fare	Booking Date	Payment Status	Booking Status
BK1001	Rose	Not selected	Economy	One Way	No	₹5,000	10/10/2026	Pending	Confirmed

Below the table, it indicates 'Showing 1 to 1 of 1 entries' and includes pagination controls with a page number '1'.

Result

The Flight Reservation System was created using Zoho Creator. The application provides a dashboard and booking report to manage and display passenger booking details, flight information, fare, and booking status.

Experiment 2: Property Buying and Rental System using Zoho Creator

Aim

To develop a simple cloud-based Property Buying and Rental System for Chennai city using Zoho Creator (SaaS) to manage property details, buying and renting options, commercial properties, rental agreements, area, location, price range, and property value.

Procedure

1. Open Zoho Creator and create a new application named Property Buying and Rental System.
2. Create a Property Details form with the following fields:
 - Property ID
 - Property Name
 - Property Type (Residential / Commercial)
 - Transaction Type (Buy / Rent)
 - Area (sq. ft.)
 - Place (Chennai locations)
 - Price Range
 - Property Value
 - Owner Name
 - Contact Number
 - Availability Status
3. Create a Rental Agreement form with:
 - Agreement ID
 - Tenant Name
 - Property ID
 - Monthly Rent
 - Security Deposit
 - Agreement Start Date
 - Agreement End Date
 - Agreement Status

4. Create a dashboard to display available properties, buying options, rental properties, and commercial properties.
5. Enter sample property details and save the records in the cloud database.
6. Open the report to view and manage the saved property and rental agreement details.

input and output

Result

The Property Buying and Rental System was designed to manage residential and commercial properties in Chennai. It supports property buying, renting, rental agreement details, location-based records, and property value management through a cloud-based application.

Experiment 3 : Car Booking Reservation System – Cloud SaaS Application

1. Aim

To create a simple cloud-based Car Booking Reservation System using Zoho Creator to search and book cabs for local trips, rental trips, outstation trips, and package bookings.

2. Procedure

1. Open [Zoho Creator](#) and sign in.
2. Create a new application named Car Booking Reservation System.
3. Create a form named Cab Booking Details.
4. Add the following fields to the form.

Form fields

Field Name	Field Type	Example
Booking ID	Auto Number	B101
Customer Name	Single Line	Rahul
Mobile Number	Phone	9876543210
From Location	Single Line	Chennai
To Location	Single Line	Pondicherry
Booking Type	Dropdown	Rental / Outstation
Package Type	Dropdown	One Way / Round Trip / Local
Car Type	Dropdown	Mini / Sedan / SUV
Booking Date	Date	15-Oct-2026
Pickup Time	Time	09:00 AM
Rental Duration	Dropdown	4 Hours / 8 Hours / 12 Hours / 1 Day / 2 Days
Number of Passengers	Number	4
Estimated Fare	Currency	₹3,000
Payment Mode	Dropdown	Cash / UPI / Card
Booking Status	Dropdown	Pending / Confirmed / Cancelled

5. Create a report named All Cab Bookings to view the saved reservations.
6. Create a dashboard with total bookings, confirmed bookings, and estimated fares.
7. Add sample booking details and test the application.

Input & Output

5. Result

Thus, a cloud-based Car Booking Reservation System was created using Zoho Creator. It manages cab searches, pickup and destination locations, rental and outstation bookings, package types, hours or days, and reservation details through a cloud application.

Experiment 4 : Library Book Reservation System – SIMATS Library

Cloud Service Provider: Zoho Creator (SaaS)

1. Aim

To create a simple cloud-based Library Book Reservation System for SIMATS Library using Zoho Creator to manage book details, available copies, rack numbers, reservations, and book status.

2. Procedure

1. Open [Zoho Creator](#) and sign in.
2. Create a new application named SIMATS Library Book Reservation System.
3. Create a form named Book Details and add the following fields.

Form 1: Book Details

Field Name	Field Type	Example
Book ID	Auto Number	B101
Title of the Book	Single Line	Database Management Systems
Author	Single Line	R. Elmasri
Publication	Single Line	Pearson
Year	Number	2023
Edition	Single Line	7th Edition
Number of Copies	Number	5
Available Copies	Number	3
Rack Number	Single Line	A-12
Book Status	Dropdown	Available / Taken

4. Create another form named Book Reservation Details.

Form 2: Book Reservation Details

Field Name	Field Type	Example
Reservation ID	Auto Number	R101
Student Name	Single Line	Rahul
Register Number	Single Line	123456

Department	Dropdown	AIDS
Book Title	Single Line	Database Management Systems
Reservation Date	Date	10-Oct-2026
Issue Date	Date	11-Oct-2026
Due Date	Date	25-Oct-2026
Return Date	Date	—
Status	Dropdown	Reserved / Taken / Returned

5. Create a report named All Books to display the book details.
6. Create another report named Book Reservations to view student reservations and book status.
7. Add sample records and test the forms and reports.

[Add a comment](#)

5. Result

Thus, a cloud-based SIMATS Library Book Reservation System was created using Zoho Creator. It manages book titles, authors, publications, year, edition, number of copies, rack numbers, student reservations, and book status (Taken/Returned).

Experiment 5 :Mark Sheet Processing System – Cloud SaaS Application

Cloud Service Provider: Zoho Creator

1. Aim

To create a simple cloud-based Mark Sheet Processing System using Zoho Creator to store student details, subject marks, total marks, average, percentage, rank, and overall performance.

2. Procedure

1. Open [Zoho Creator](#) and sign in.
2. Create a new application named Mark Sheet Processing System.
3. Create a form named Student Mark Details.
4. Add the following fields to the form.

Form fields

Field Name	Field Type	Example
Student Name	Single Line	Anu
Register Number	Single Line	101
Department	Dropdown	AIDS
Subject 1 – Python	Number	85
Subject 2 – DBMS	Number	90
Subject 3 – AI	Number	88
Subject 4 – Maths	Number	80
Subject 5 – Cloud Computing	Number	92
Total Marks	Number	435
Average	Decimal	87
Percentage	Decimal	87%
Rank	Number	1
Overall Performance	Dropdown	Excellent / Good / Average / Poor
Result	Dropdown	Pass / Fail

5. Create a report named Student Mark Sheet to display saved student marks.
6. Enter marks for students using the form.
7. View the records in the report to check student performance.

Note: Total, average, percentage, rank, and result can initially be entered manually. For automatic calculation, configure formulas or Deluge workflows in Zoho Creator.

Input & Output

5. Result

Thus, a cloud-based Mark Sheet Processing System was designed using Zoho Creator to manage student details, subject marks, total, average, percentage, rank, and overall performance. It demonstrates the use of SaaS for storing and accessing academic records through the cloud.

Experiment 6 : Payroll Processing System – Cloud SaaS Application

1. Aim

To create a simple cloud-based Payroll Processing System using Zoho Creator to manage employee details, experience, basic pay, HRA, DA, TA, deductions, gross pay, and net pay.

2. Procedure

1. Open [Zoho Creator](#) and sign in.
2. Create a new application named Payroll Processing System.
3. Create a form named Employee Payroll Details.
4. Add the following fields to the form.

Form fields

Field Name	Field Type	Example
Employee ID	Auto Number	E101
Employee Name	Single Line	Arun
Department	Single Line	IT
Present Organization Experience	Number	2 years
Overall Experience	Number	5 years
Basic Pay	Currency	₹30,000
HRA	Currency	₹6,000
DA	Currency	₹3,000
TA	Currency	₹2,000
Other Allowances	Currency	₹1,000
Gross Pay	Currency	₹42,000
PF Deduction	Currency	₹1,800
Other Deductions	Currency	₹700
Net Pay	Currency	₹39,500
Salary Month	Dropdown	October
Payment Status	Dropdown	Pending / Paid

5. Create a report named Employee Payroll Report to display the employee salary details.
6. Enter employee information and salary components using the form.
7. View the report to check gross pay, deductions, net pay, and payment status.

Input & Output

6. Result

Thus, a cloud-based Payroll Processing System was designed using Zoho Creator to maintain employee details, work experience, salary components, deductions, gross pay, and net pay. It demonstrates how SaaS can be used to manage payroll records through a cloud application.

Experiment 7 : Students Attendance System – Cloud SaaS Application

Cloud Service Provider: Zoho Creator

1. Aim

To create a simple cloud-based Students Attendance System using Zoho Creator to manage student details, course information, present/absent status, OD requests, grades, and attendance percentage.

2. Procedure

1. Open [Zoho Creator](#) and sign in.
2. Create a new application named Students Attendance System.
3. Create a form named Student Attendance Details.
4. Add the following fields to the form.

Form fields

Field Name	Field Type	Example
Student Name	Single Line	Anu
Register Number	Single Line	101
Department	Dropdown	AIDS
Course Name	Single Line	Artificial Intelligence
Total Classes	Number	50
Classes Attended	Number	45
Classes Absent	Number	5
Attendance Percentage	Decimal	90%
Today's Attendance	Dropdown	Present / Absent
OD Request	Dropdown	Yes / No
OD Status	Dropdown	Pending / Approved / Rejected
Grade	Dropdown	A / B / C / D
Attendance Status	Dropdown	Eligible / Shortage

5. Create a report named Student Attendance Report to display attendance records.
6. Enter student details and attendance information.

7. View the report to check attendance percentage, OD requests, and student status.

Note: The sample values can be entered manually. To calculate attendance percentage automatically, configure a formula or workflow in Zoho Creator.

Input & Output

5. Result

Thus, a cloud-based Students Attendance System was designed using Zoho Creator to manage student details, courses, present and absent records, OD requests, grades, and attendance percentages. The application demonstrates SaaS by storing and managing attendance records through a cloud platform.
