8. Student Counselling System

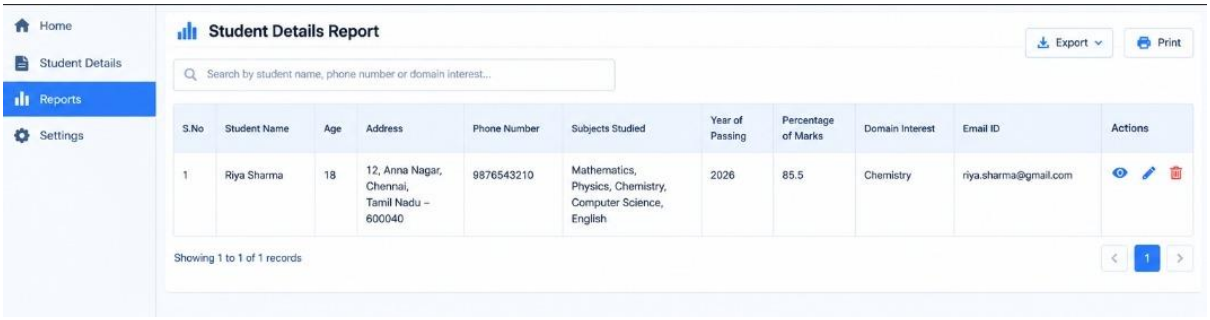

Aim: To develop a simple cloud-based Student Counselling System using Zoho Creator to store student details, academic information, year of passing, percentage of marks and domain interests.

Procedure:

1. Create a new application in Zoho Creator named Student Counselling System.
2. Create a form with fields such as student name, age, address, phone number, subjects studied, year of passing, percentage of marks and domain interest.
3. Add suitable field types and save the form.
4. Enter sample student details and submit the form.
5. View the submitted student records using the report.

Input & Output:

Result: The Student Counselling System was created successfully using Zoho Creator to store and manage student academic details and counselling information through a cloud-based application.

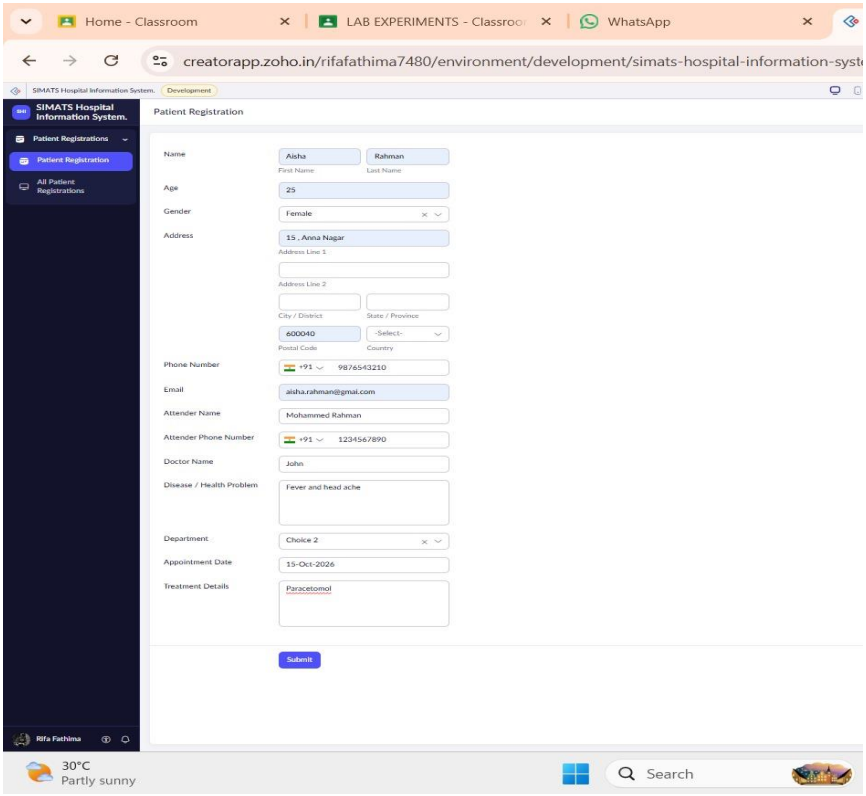

9. Hospital Information System

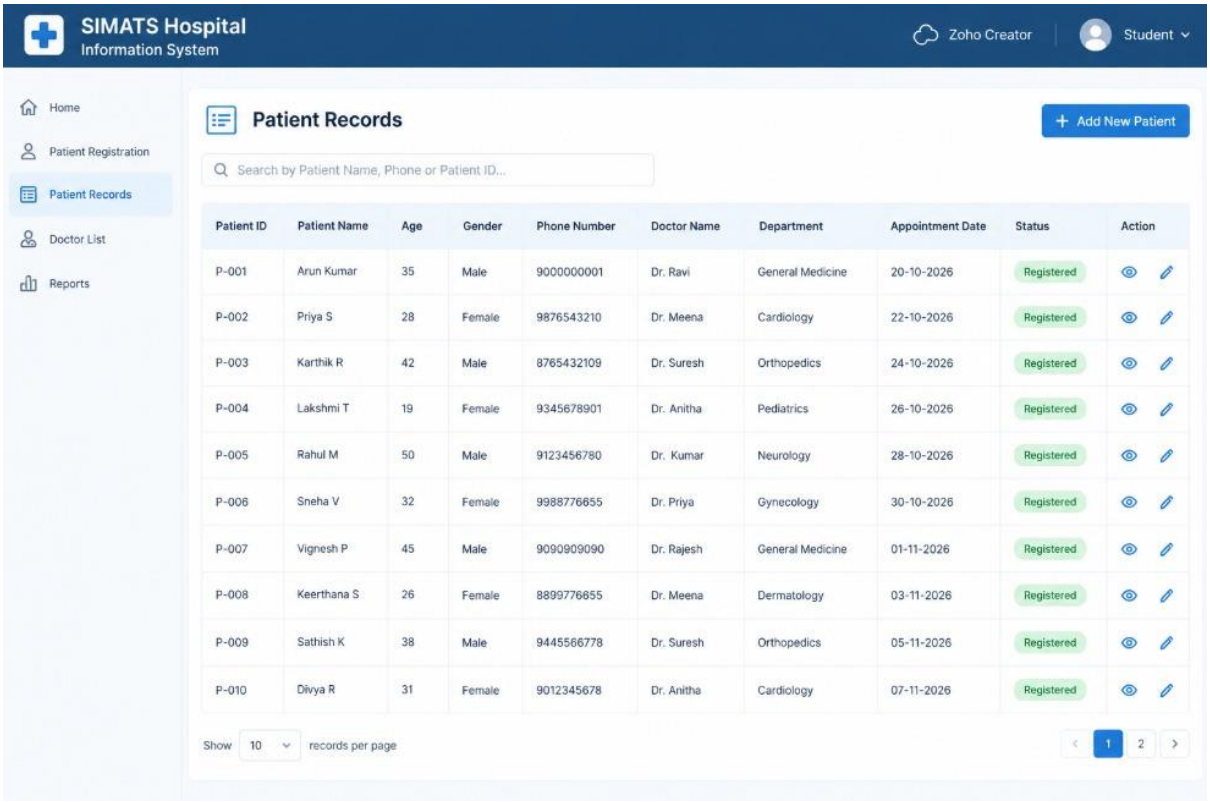

Aim: To develop a simple cloud-based Hospital Information System for SIMATS Hospital using Zoho Creator to manage patient details, attendant information, doctor details and disease information.

Procedure:

1. Create a new application in Zoho Creator named Hospital Information System.
2. Create a Patient Information form.
3. Add fields such as patient name, age, address, phone number, email, attendant name, attendant phone, doctor name and disease.
4. Save the form and enter sample patient information.
5. Submit the form and view the saved records in the report.

Input & Output:

Result: The Hospital Information System was created successfully using Zoho Creator to store and manage patient and hospital information through a cloud-based application.

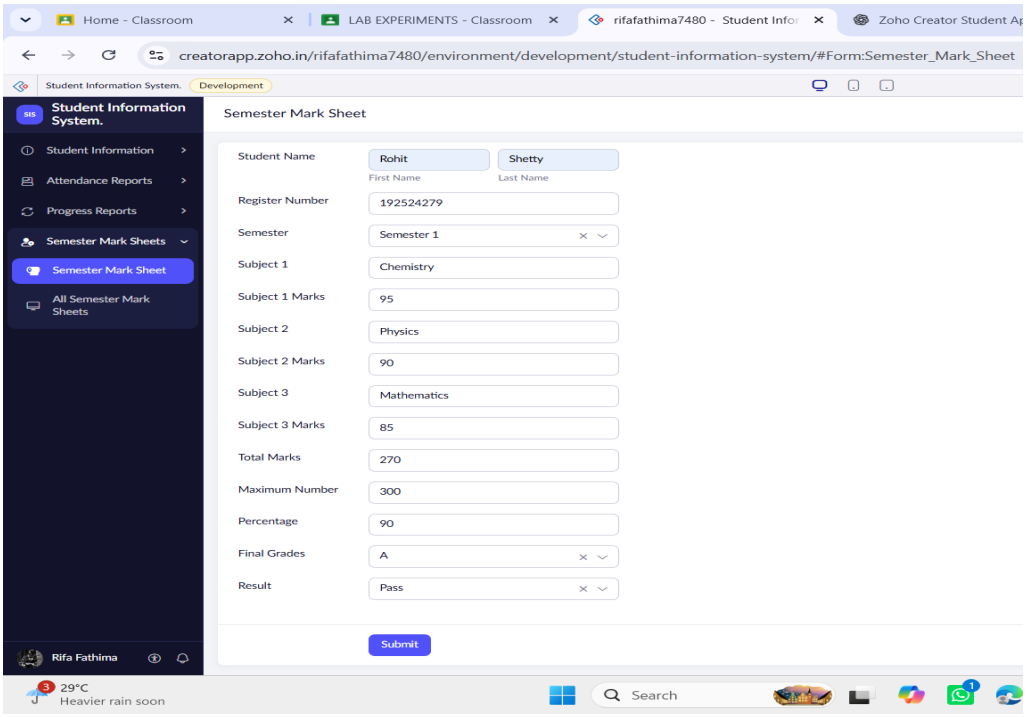

10. Student Information System Using C Program

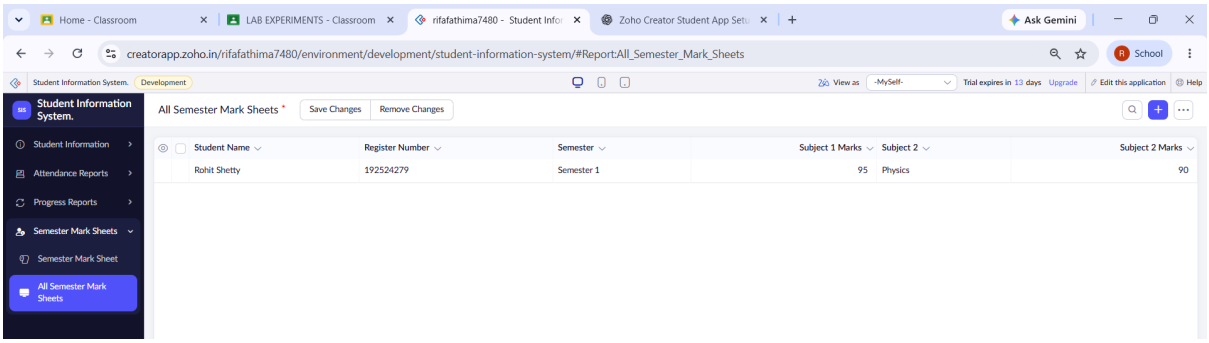

Aim: To develop a simple student information application using a cloud service platform to display student details, courses, grades, attendance reports, progress reports and semester mark sheets.

Procedure:

1. Create a cloud application using Zoho Creator.
2. Create a Student Information form with student name, register number, address, phone number and age.
3. Add fields for courses and grades.
4. Create separate forms for attendance reports, progress reports and semester mark sheets.
5. Enter student details and submit the forms.
6. Use a C compiler separately to write and execute a C program that displays student information, if C execution is required.
7. View the stored information through the cloud application's reports.

Input & Output:

Result: The Student Information System was created using Zoho Creator to manage student details, academic performance, attendance and semester marks, demonstrating the basic features of SaaS.

Note: Zoho Creator does not directly compile and execute C programs. The C program must be run separately using a C compiler.

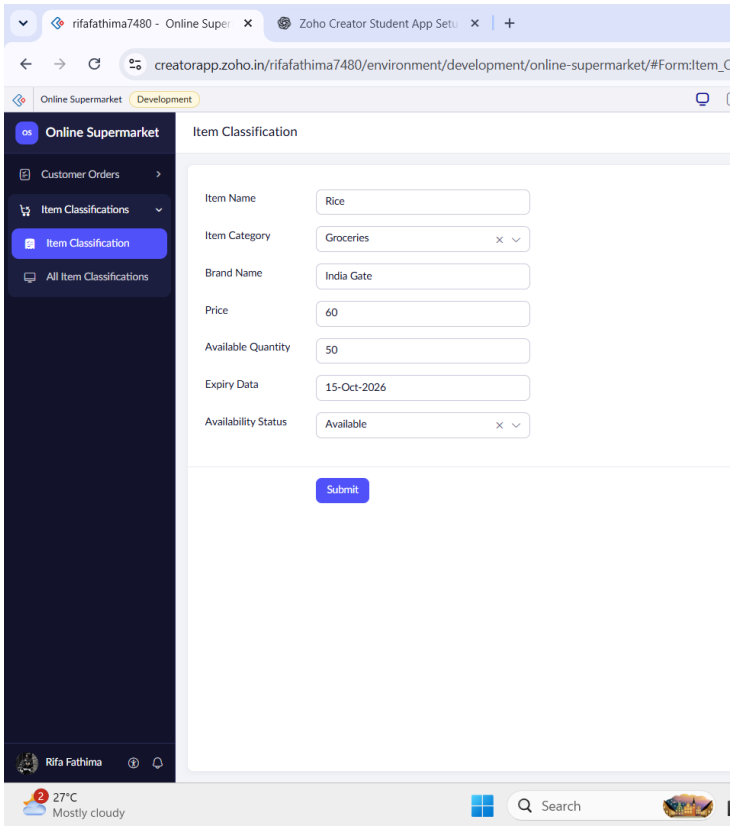

11. Online Supermarket Application

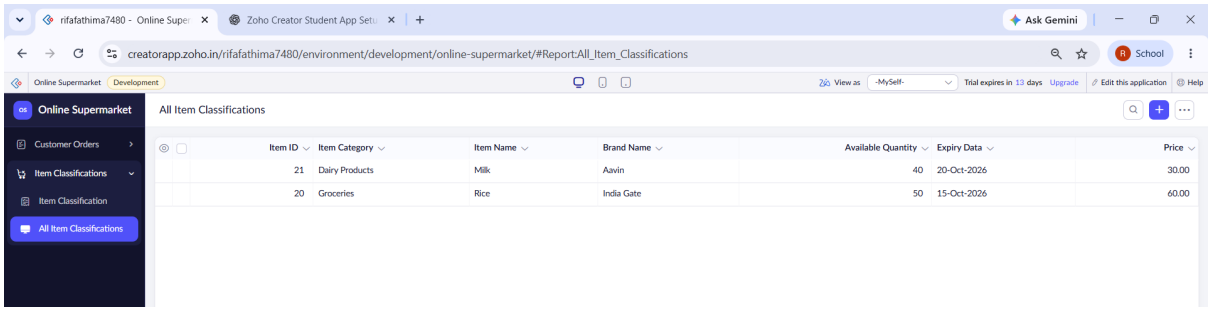

Aim: To develop a simple cloud-based Online Supermarket application using Zoho Creator to manage customer details, supermarket items, item classifications, quantities and prices.

Procedure:

1. Create a new application in Zoho Creator named Online Supermarket.
2. Create a Customer Order form with customer name, address, phone number, email, item name, quantity and price.
3. Create an Item Classification form with item name, category, brand name, price, available quantity, expiry date and availability status.
4. Enter sample supermarket item details and customer orders.
5. Submit the forms and view the saved records in the reports.
6. Verify the customer order and item classification details.

Input & Output:

Result: The Online Supermarket application was created successfully using Zoho Creator to manage customer orders, product classifications, prices and stock details through a cloud-based SaaS application.
